Subject: Adjustment of Headlights Optical Axis is not necessary when driving LHD vehicle in RHD country or vice versa

DESCRIPTION

When you receive a customer inquiry about the above subject matter, please explain to the customer as below.

Copy from Owner's Manual (The description has been added to the latest versions.)

Headlights are equipped which do not blind drivers approaching in the opposite direction no matter what side of the road you must drive your vehicle (left-hand or right-hand traffic). Therefore, it is not necessary to adjust the optical axis of the headlights when switching temporarily to driving on the opposite side of the road (left-hand or right-hand traffic).

NOTE: In case the customer registers the vehicle for permanent use in a country of the opposite side driving for moving etc., it is recommended to check and follow any local regulation.
